01 EXECUTIVE SUMMARY

This report presents findings of an automated reconnaissance and vulnerability assessment conducted against **google.com** on 2026-03-07 00:36:34 using CyberRecon Pro v3.0 with the **Quick** scan profile.

The assessment identified **0 vulnerabilities** across 0 exposed services on 6 live hosts. The overall risk score is **0.0/10**. 0 CRITICAL and 0 HIGH severity findings require immediate remediation.

Exploit references are mapped to CVE identifiers, CVSS scores, and MITRE ATT&CK techniques. Compliance gaps identified against PCI-DSS, HIPAA, NIST SP 800-53, and CIS Controls are documented below.

02 INFRASTRUCTURE DISCOVERY

HOSTS DISCOVERED

07 ATTACK PATHS

- None found

08 COMPLIANCE STATUS

- ✓ PASS PCI-DSS: 6 controls affected
- ✓ PASS HIPAA: 2 controls affected
- ✓ PASS NIST: 3 controls affected

- ✓ PASS CIS: 3 controls affected
- ✓ PASS OWASP: 2 controls affected

09 SECURITY RECOMMENDATIONS

- ◉ Implement network segmentation and micro-segmentation (zero-trust architecture).
- ◉ Enable comprehensive logging and SIEM integration (Splunk/ELK/Wazuh).
- ◉ Deploy EDR/XDR on all endpoints (CrowdStrike/SentinelOne/Defender).
- ◉ Enforce principle of least privilege across all accounts and services.
- ◉ Implement automated patch management with SLA: Critical <24h, High <7d.
- ◉ Conduct regular penetration testing (quarterly) and vulnerability assessments.
- ◉ Implement multi-factor authentication on all external-facing services.
- ◉ Establish incident response plan with tabletop exercises.
- ◉ Regular security awareness training for all staff.
